Sprint Review Notes

Attending

Othman Alikhan
Jhighar Mistry
Taiwo Kareem
Danilo Andrade
Pamilerin Iwalewa

Absence

None.

Complete Tasks

Task 2	Display a booking reference that can be given to the customer
Task 4	Record details of meals ordered by a table
Task 7	Store details of the current menu – name, description, price (assume 3 or 4 options in each case for starter, main course and dessert, plus 3 or 4 beverage options)

Incomplete Tasks

Task 1	Make a booking for a table manually, based on information provided by the customer when they phoned (date & time, party size, customer name, phone number, email address should all be stored)
Task 3	Display an overview of bookings for a given date/time period (shown graphically on a room plan?)

Backlog Summary

2, 4, 7	These tasks went well generally speaking. However, there was much struggle trying to connect the individual components (client-server-database).
1, 3	One of the main reasons these tasks were not complete because a lot of time was spent in attempting to connect the client-server-database (Task 2, 4, 7) as oppose to completing these tasks.

Things Gone Well

- Demonstration was good
- Everything worked in terms of code (server-database-client)
- Django was implemented (much to our surprise)
- Git messages are now cleaned up and beautiful…

Things That Could Have Gone Better

- Connecting the server and database (i.e. proper use of Django rather than the 'hacky' implementation that was used during the demonstration)
- Initially no commit message style which caused issues later down the line (so had to be cleaned up eventually).
- The sprint planning meeting was later than usual (couple of days into the sprint).
- A member had personal circumstances (which was later explained) that hindered their crippled their performance.
- Task distribution could have been distributed better (i.e. more balanced workload on everyone)
- Issues getting the code up and running on DEC10 machines due to library dependencies.

Role Issues

Othman Alikhan	**Scrum Master, Developer**	**No issues**
Jhighar Mistry	**Developer**	**No issues**
Taiwo Kareem	**Developer**	**No issues**
Danilo Andrade	**Note Taker, Wiki Sustainer**	**No issues**
Pamilerin Iwalewa	**Developer**	**No issues**

Further Notes

Message to **everyone:**

- Merging the server and database folder into a single folder.
- Read through the official to be written coding conventions documentation.
